PART-B

6/b) ALLOWANCES IN WORK MEASUREMENT:-

Allowances:-

The term allowances is mean by additional time Recovered by the worker for unpredictable Reasons while they are Involved in the process of Production activity.

Types of Allowances:-

→ Relaxation Allowances.

a) ~~Perferred~~ Allowances.

b) Fatigue Allowances.

→ Contingency Allowances.

→ Process Allowances.

→ Interference Allowances.

→ Special Allowances.

Relaxation Allowances:-

Relaxation Allowances is mean by the time given for the workers for its personal works and unavoidable Reasons.

The personal Reasons works are given under to the ~~perferred~~ Allowances.

And the Unavoidable Reasons are

given under the Fatigue allowances.

Perfearred allowances:-

The perfearred allowances are given by the Company to the worker for handwashing, using Rest room, Tea break and other perfearred works reason.

In perfearred allowances for Man is 5% and for woman is 7% of its produce Production over all time.

Fatigue Allowances:-

Fatigue allowances are given to the workers for the reason of free trial in because of Smoke production area, Painting section and over noise area.

The worker want to be set for his section, the taken settle down time is called fatigue allowances.

Contingency allowances:-

In Contingency allowances is the short time delay period of production for the reason of wrong tool, Job and

Machine Selection or waiting for the special attachments and other contingency Reasonable delay are dealt In this allowances.

Process allowance:-

process allowance is deals with the time taken for Reforming the tool Sharpness at the time of Production and New tool Attachment and tool breaking Reasonable allowance are under in the process allowance.

Interference allowance:-

In Interference allowance the time taken to fix the tool and job for the three or four machine by a worker at the initial, the time of Interference is called as Interference allowance.

Special allowance:-

The special allowance are not coming into the allowance area because it is the emergency period allowance.

- a) cleaning allowances
- b) Maintenance allowances
- c) Special tool Attachment allowances
- and, d) Shift changes allowances.

7b) Work Sampling:-

- i) Work Sampling is one of the work measurement technique used to ~~was~~ statistical test method by obtaining the true value of observation to analysis the result and measure the time taken to perform the operation.

Principle:-

To the observation of workers and time to supervise the work to perform and at the ending and its time is recorded.

procedure for work sampling:-

Work Sampling is performed by three main aspects:-

- a) Work preparing [Case (i)]
- b) Work performance [Case (ii)]
- c) Analysis & Current Result of an operation [Case (iii)]

WORK PREPARING:-

Work preparing the process of set tool and work piece at the machine and then the time take for fixing is called work preparing.

PRINCIPAL

Work Performance :-

the time taken to machines the job to complete at some designed work is under in the work performance Region.

Analysis & Current Result of the operation.

It is the final stage of work sampling and calculating the time for the operation of inspection are calculated in this Region.

(ii) PMTS [predetermined Motion Time Standard].

Predetermined Time Standard is the predefined value and it is noted ahead.

And the value are checked at each and every time of the production is the function of PMTS.

They are three types of PMTS.

- a) WFS [Workforce Standard]
- b) MTM [Method/Motion time Measurement]
- c) MTA [Motion time Analysis].

Objectives:-

- To determine the working hours.
- To determine the machine operation time.
- To calculating Production rate.
- To calculating allowance rate.
- To finalized the direct cost of the product.

Advantages:-

- It gives some allowance to workers.
- It helps to determine working hours.
- It is useful to increase production.
- It is mainly used to determine production time.
- And also used to determine the delay time period.

Limitations:-

- It restricts the workers.
- Some time over work load to the operator.
- Only useful for mass production company.
- Production rate is high it is valuable.
